

# Remote Indicator Scale

## Model DS6100

The Model DS6100 Remote Indicator Scale offers a variety of features in a compact, portable design. The digital read-out can be placed on a tabletop or mounted on a wall. Constructed of painted steel, the low profile platform features extra wide feet with Sure-Grip pads to keep the base from tipping or slipping. The DS6100 can be used on any type of flooring - including carpeting. Stepping on the scale powers on the scale and the patient's weight is quickly displayed in the large LCD read-out.

### Motion Lock

Accurately recording the weight of patients with tremors or unsteadiness is possible thanks to the *Motion Lock* technology. This standard feature calculates the weight based on an average of weights while the patient is moving on the scale. Once an accurate average is calculated, the weight is displayed, the scale beeps, and the weight remains on the LCD panel until the scale is zeroed or the scale is shut off.

### MAXIMUM CAPACITY

500 x 0.2 lb (225 x 0.1 kg)

### ACCURACY

+/- 0.2 lb (0.1 kg)

### DIMENSIONS

Platform 15" L x 14.5" W x 2" H
